

HAVE YOU RUN INTO INTERFERENCE WITH A JOB OR INTEGRATION FAILING?

Even if it's just down for a day the risk and frustration levels are extremely high if integration related to lock confirmations, prefund QC reports, accounting reports, warehouse reports, servicing extracts, business intelligence etc. are down.

Are you sick of seeing this message every 30 days?

The Ignite Password Automator Tool ensures your service account passwords never expire and allows related jobs to continue to run without issue. The Password Automator Tool synchronizes the password storage process and eliminates workflow exposure due to expiring passwords. It will automatically update service account passwords using a random password generator and eliminate the need for users

having to manually reset passwords during a fire drill of failed integrations and frustrated department heads.

(PS- If your work-around is to run every integration/application via the 'admin' user account, we know that's not ideal either.)

SAMPLE USE CASES FOR THE PASSWORD AUTOMATOR TOOL

- Do you use Password Reset Settings?
- Do you have automated integrations running with service accounts?
- Do you have automated jobs and integrations running with those service accounts? (E.g. PPEs, CRMs, BI, data warehouse, automated jobs / tasks, etc)
